ONGOING PROJECTS

Modernizing Replication Protocols for Data-heavy Workloads, Project Leader Sep 2022 - Present

- Study the characteristics of consensus and replication protocols under modern data-heavy workloads.
- Propose, implement, and evaluate new protocols that take advantage of data-centric, bandwidth-aware, and heterogeneity-aware techniques (e.g. erasure coding) and on emerging new hardware (e.g. persistent memory).
- Design and implement Summerset, a distributed and protocol-generic key-value store written in async Rust.
